

Omni Matrix

Feature Comparison — Built vs. the Lygiron Feature Catalogue

This document maps every feature in the Lygiron Character Sheet Feature Catalogue against what is actually built in the Omni Matrix application today. Each feature is marked **Built**, **Partial** (a foundation exists but is incomplete), or **Not built**, with a short note on the current state. A summary and the highest-value gaps follow the tables.

178 catalogue features assessed · 12% built, 16% partial, 71% not yet built.

Layout and navigation

Feature	Status	Notes
Player-specific screen	Built	Character canvas + roll log in one layout.
GM-specific screen	Built	GmConsole with multi-sheet workspace, log, dice tray.
Persistent identity panel	Not built	No sticky header; canvas scrolls as one.
Tabs view	Built	Multi-page layout tabs; add / rename / delete.
Saved view preference	Partial	Layout persisted; density / scroll / log not saved per-user.
Sheet search	Not built	Not built.
Tag and category filters	Not built	Not built.
Collapsible groups	Not built	Blocks hide entirely; no in-place collapse.
Full / Compact / Minimal density	Not built	In architecture; not yet in UI.
Responsive workspace (3>2>1 col)	Partial	Grid reflows; no explicit column breakpoints.
Combat-focused view	Not built	Not built.
Personal pinning	Not built	Not built.
Stable layout / progressive disclosure	Partial	Snap-grid stable; no disclosure pattern.
Controller region navigation	Not built	Not built.
Touch support	Not built	No explicit touch optimisation.

Identity, stats, and resources

Feature	Status	Notes
Character identity card	Partial	Editable name; no portrait / archetype field.
Portrait management	Not built	Not built.
Body-location health summary	Not built	Tempus territory; not part of OM.
Full health view	Not built	Not in OM scope.
Dot tracks	Built	'dots' field type fully rendered.
Resource bars (pool)	Built	'pool' field (current / max) fully rendered.
Number fields	Built	'number' field fully rendered.
Counters / checkbox series	Built	'track' box field with states.

Feature	Status	Notes
Base and temporary values	Not built	No temp / base separation in UI.
Effective value display	Partial	Derived final value shows; no temp breakdown.
Inline specializations	Not built	Not built.
Stat descriptions / help text	Partial	'help' key in format; UI tooltip unconfirmed.
Stat relationships	Not built	Tracked internally; not exposed.
Computed values	Built	Live reactive derived values (expression.mjs).
Formula disclosure by role	Not built	No GM formula-audit view.
Manual override (keep formula)	Not built	Not built.
Permission-aware rows	Partial	editable player/gm/none in format; UI enforce unconfirmed.
Validation feedback	Partial	Cycle / bad-ref detection in engine; no rich UI.

Actions, abilities, and entries

Feature	Status	Notes
Reusable action rows	Partial	Named rolls act as rows; no general feature pattern.
At-a-glance costs and uses	Not built	Not built.
One-step execution	Partial	Named rolls fire in one click; not general.
Automatic bookkeeping	Partial	resources.costs in format; engine apply unconfirmed.
Blocked-action explanations	Not built	Not built.
Entry details (drill-down)	Not built	Not built.
Entry search and filtering	Not built	Not built.
Restricted choice pools	Not built	Not built.
Manual recovery request	Built	ProposePanel queues requests to GM.
Pending approval state	Built	GM Requests panel: approve / deny.
Non-destructive entry evolution	Not built	Not built.

Rolling from the sheet

Feature	Status	Notes
Quick Roll	Built	Named rolls trigger from the sheet.
Compose Roll (multi-source)	Not built	Not built.
Touch-friendly compose mode	Not built	Not built.
Mixed dice pools	Not built	Only pool-success d10; polyhedral later.
Mean-value rolls	Not built	Not built.
Automatic-success resources	Not built	Not built.
Situational modifiers	Not built	No pre-roll modifier UI.
Split-pool actions	Not built	Not built.
Chance-roll fallback	Not built	Not built.
Source-coded pool breakdown	Not built	Totals show; no per-source attribution.
System-specific outcomes	Built	Successes / crits / overreach / ruin per config.
Roll type tags	Not built	Not built.
Saved roll templates	Not built	Definition rolls exist; no user-saved templates.
Campaign roll templates	Not built	Not built.
Open and whispered rolls	Not built	Not built.
Result overlay	Not built	Results append to the log.
Persistent prepared tray	Not built	Not built.

Action Log and result transparency

Feature	Status	Notes
Unified activity panel	Built	Shared action log collects all events.
Dice and Full modes	Not built	Single flat log view.
Player-limited log	Not built	All entries visible to all connected users.
Complete GM log	Built	GM console shows all events incl. approvals.
Glance / Compute / Trace levels	Not built	Flat entries; no detail hierarchy.
Readable calculation rows	Partial	Successes / outcome show; not a formatted equation.
Action cost history	Partial	Actions logged; before/after resources not recorded.

Feature	Status	Notes
Human-readable rules trace	Not built	Not built.
Search and filters on log	Not built	Not built.
Collapsible log entries	Not built	Not built.
Linked event chains	Not built	Not built.
Entry pinning and copying	Not built	Not built.
Whisper discussions	Not built	Not built.
System-aware rerolls	Not built	Not built.
GM ruling notes / override	Not built	Not built.
Reveal controls	Not built	Not built.
Retroactive visibility changes	Not built	Not built.
Approval actions	Built	GM Requests panel in live session.

GM live-session: Roster and multi-character control

Feature	Status	Notes
Character roster	Built	localStorage roster + live session roster.
Player character cards	Built	Compact GM cards (dots/pools/tracks/statuses).
Roster search	Not built	Not built.
Stackable roster filters	Not built	Not built.
Saved filter sets	Not built	Not built.
Custom roster order	Not built	Not user-configurable.
Character lifecycle (dup/archive/del)	Partial	New + delete built; no duplicate / archive.
Adaptive multi-sheet grid (1/2/4)	Built	Column toggle in GM console.
Panel focus controls	Partial	Column count adjusts; no per-panel focus / pin.
Read-mostly secondary panels	Not built	Not enforced.

GM live-session: Effects and adjudication

Feature	Status	Notes
Roster multi-select	Not built	Not built.
Batch effect application	Not built	Not built.
Recent / favourite effects	Not built	Not built.
Effect search and categories	Not built	Not built.
Default one-step apply	Not built	Not built.
Optional effect parameters	Not built	Not built.
Immediate state feedback	Partial	Status toggles update session; no roster badges.
Partial-failure handling	Not built	Not built.
Per-application visibility	Not built	Not built.

GM dice control

Feature	Status	Notes
NPC quick-switch	Not built	Not built.
Ad-hoc / fortune rolls	Partial	GM rolls on behalf of roster; no character-free roll.
Challenge parameter control	Not built	Not built.
Hidden challenge values	Not built	Not built.
Secret rolls	Not built	Not built.
Opposed rolls	Not built	Not built.
Group roll requests	Not built	Not built.
Player tray mirror	Not built	Not built.
Tray lock	Not built	Not built.
Post-roll adjudication	Not built	Not built.

GM template / homebrew: Unified Template Workspace

Feature	Status	Notes
Single authoring workspace	Not built	Definitions edited as JSON externally.
Preset-first start	Partial	One sample system; no preset picker UI.

Feature	Status	Notes
Broad system coverage	Partial	One dice model; architecture supports more.
Starter templates	Not built	Not built.
Object Tree	Not built	Not built.
Selection-driven Inspector	Not built	Not built.
Live test-character preview	Not built	Not built.
Play and Edit modes	Partial	Block picker is rudimentary; no true mode switch.
Protected editing session	Not built	Not built.
Undo and redo	Not built	Not built.
Unsaved-change protection	Not built	Not built.

Sheet construction

Feature	Status	Notes
Widget catalogue (field types)	Built	9 field types; no icon / image-frame widgets.
Widget search and categories	Not built	Fields come from JSON; no browser.
Drag-and-drop placement	Built	react-grid-layout with ghost preview.
Keyboard / controller placement	Not built	Not built.
Snap-to-grid layout	Built	Locked decision, fully implemented.
Group and tab authoring	Partial	Page tabs built; in-page group reorder external.
Post-placement configuration	Partial	Field-picker per block; no full inspector.
Visibility rules (conditional)	Partial	Hide / show toggle; no rule-based visibility.
Density overrides per block	Not built	Not built.
Pinnable row configuration	Not built	Not built.
Cross-density preview	Not built	Not built.

Rules, formulas, and bindings

Feature	Status	Notes
First-class bindings	Partial	'derived' is the binding; not an inspectable object.

Feature	Status	Notes
Link creation (GUI)	Not built	Editing is in JSON.
Tiered condition builder	Not built	Not built.
Advanced formula input (in-app)	Not built	Expressions live in JSON, not in-app.
Live calculation preview	Not built	Not built.
Global variables	Not built	No explicit global variable concept.
Dependency overlay	Not built	Not built.
Full graph view	Not built	Not built.
Circular dependency prevention	Built	Cycle detection at load (expression.mjs).
Broken-reference warnings	Partial	Engine surfaces errors; no rich UI.
Safe deletion choices	Not built	Not built.
Automatic refactoring on rename	Not built	Not built.
Rule-block config / validation	Not built	Not built.

Entry and facet authoring

Feature	Status	Notes
Guided entry creation	Not built	No entry concept beyond list rows.
Facet library	Not built	Not built.
Activate / deactivate facet	Not built	Not built.
Migration-safe facet replacement	Not built	Not built.
Preset remapping	Not built	Not built.
Compatibility guidance	Not built	Not built.
Official tag picker	Not built	Not built.

Template management

Feature	Status	Notes
Save as Template	Not built	No in-app template saving.
Template metadata	Partial	Definition has id/name/version/author; not surfaced.

Feature	Status	Notes
Start from Template	Not built	Not built.
Template preview / Clone / Search	Not built	Not built.
Automatic versioning	Not built	schemaVersion exists; no change tracking.
Propagate or pin updates	Not built	Not built.
Data-preserving migration	Not built	No migration logic.
Migration preview and warnings	Not built	Not built.

Content library authoring

Feature	Status	Notes
Locked content libraries	Not built	Not built.
Customize by forking	Not built	Not built.
New typed libraries	Not built	Not built.
Schema-driven entry forms	Not built	Not built.
Library search and filtering	Not built	Not built.
Strict JSON / CSV import	Partial	Character + layout JSON import; no schema diff/CSV.
Database-to-sheet bindings	Not built	Not built.
Safe library rename / delete	Not built	Not built.
Locked-version comparison	Not built	Not built.
Custom library export	Partial	Character + layout JSON export; no library export.

Accessibility and localization

Feature	Status	Notes
Mouse and keyboard operation	Partial	Mouse works; keyboard nav not explicit.
Controller / adaptive navigation	Not built	Not built.
Touch-sized controls	Not built	Not built.
UI and text scaling	Not built	Not built.
High-contrast mode	Not built	Not built.

Feature	Status	Notes
Colorblind-safe communication	Not built	Not built.
Screen-reader descriptions	Not built	Not built.
Reduced-motion handling	Not built	Not built.
Western and CJK localization	Not built	Not built.
Accessible error recovery	Not built	Not built.

Headline gaps — highest-value new work

The clusters below are where the catalogue describes whole feature areas that are almost entirely absent today. They are the natural candidates for the next rounds of work, roughly in priority order.

1

In-app template / system authoring

The entire Unified Template Workspace: Object Tree, Inspector, in-app formula editor, play/edit modes, undo/redo. Build or edit a system without touching JSON.

2

Content library authoring

Homebrew collections, library browser, schema-driven forms, fork-to-customize, import/export, version comparison.

3

Roll composition and the dice tray

Compose Roll, mixed pools, situational modifiers, split pools, persistent prepared tray, result overlay, roll type tags, whisper rolls.

4

Action Log depth

Player-limited visibility, glance/compute/trace levels, linked event chains, whisper discussions, GM ruling notes, log search/filter.

5

Effects and adjudication

The whole batch-effect workflow: multi-select, apply to a target set, categories, immediate feedback.

6

GM dice control

Opposed rolls, group roll requests, player tray mirror, secret rolls, ad-hoc rolls, challenge parameter control.

7

Layout UX

Persistent identity panel, density modes, collapsible groups, sheet search, tag filters, personal pinning, combat-focused view.

8

Stat depth

Temporary vs base value separation, inline specializations, formula disclosure by role, manual override, stat-relationship display.

9

Accessibility

Almost entirely absent; a full pass is needed before any public release.

1

0

Character identity

Portrait upload / crop, identity card, body-location health summary (partial overlap with Tempus).

Scope note. Body-location health and a 3D health model sit largely in Tempus (product 03), not Omni Matrix. The catalogue lists several items as intentionally out of scope (dedicated mobile app, community marketplace, external imports such as D&D Beyond, AI-generated NPCs, custom dice skins, 3D preview) — these are excluded from the gap analysis above.
